

# Call for Papers

„Credible Identification and Structural Modeling (CrIStM.as)“

a.k.a. „Natural Experiments and Controlled Field Studies“

June 23–25, 2017 – Ohlstadt, Hotel Alpenblick

The aim of the workshop is to bring together leading international researchers and in particular junior researchers who use natural experiments, structural empirical approaches, or controlled field studies to achieve credible identification of causal relationships in economic research. There will be plenty of scope for in-depth scientific interactions between junior and senior researchers. The workshop will take place **June 23–25, 2017 in Ohlstadt** near Munich.

We will cover the costs for travel, accommodation, and workshop participation (including meals) for all presenters. There are limited funds to support accommodation and participation by PhD students.

**All researchers interested in presenting are invited to submit finished papers or extended abstracts (5 pages). There will also be the possibility to present in a poster session.**

In addition, there are a limited number of slots for junior researchers who are interested to participate without presenting a paper. These should send with their application a short motivation letter (max. 1 page) and an academic CV. In case of excess demand, preference will be given to those participants with presentable work.

Submissions (PDF of the paper or extended abstract) and applications (CV and motivation letter) should be sent **no later than March 1, 2017** to [ammerseeworkshop@googlemail.com](mailto:ammerseeworkshop@googlemail.com). Accepted participants will be informed no later than March 15.

**Organizers:** Florian Englmaier (LMU Munich), Christina Gathmann (U of Heidelberg), Georg Gebhardt (U of Ulm), Susanne Prantl (U of Cologne), Dirk Sliwka (U of Cologne), Joachim Winter (LMU Munich)
